

September 16, 2024

To the Members of the Mount Juliet Traffic Commission,

I am **opposed** to any speed calming devices on either Saddle Wood or Saddle Brook roads in the Saddle Wood subdivision.

There is no support for this as based on the speed studies done on both roads. There was not more than 2% of the traffic that was at an actionable speed.

Further the effect that speed humps have on emergency services is a delay in response time. I have lived in Saddle Wood for five years and have had to call for paramedics four times. I cannot imagine having to wait even a minute longer than necessary for the arrival of the paramedics or any delay what so ever in their trip to the hospital.

Please **do not** approve any speed calming devices for the neighborhood. If you consider the added emergency response time and no support from the speed studies, it is just not warranted.

Thank you for your time concerning this matter.

Sincerely,

David and Barbara Bressler
